

The core topics

1) Global Digital Health

Although novel applications of information and communication technologies in the health sector carry the potential to solve many long-standing challenges, others remain unresolved despite considerable efforts. We welcome perspectives on digital health education, telemedicine, big data in poor settings, health information systems, and other topics. Do the needs of digital health systems change when they address integrated approaches such as One Health and Universal Health Coverage? How can global digital health contribute to health system strengthening in resource-poor settings?
